

"Who can benefit from the finest and most advanced coating solutions for HP Indigo label and packaging presses?"

You can.

working for you.

avano

Sales Information Sheet

Under the framework of a Solutions Partner Agreement, Sun Chemical is actively developing end-to-end solutions for HP Indigo presses with a strong focus on the label and packaging markets.

SunEvo[™] Protect LEP is a comprehensive and expanding range of over print varnishes (OPVs) suitable for labels, flexible packaging and folding carton.

Within the framework of the agreement Sun Chemical brings a wealth of expertise and experience in waterbased, UV, electron beam and solvent-based coatings formulations to enhance the value proposition of HP Indigo jobs. Whether it's on film, paper or other substrates, you can be confident that, with Sun Chemical, your job will meet the market and regulatory requirements time and time again. The SunEvo[™] Protect LEP range of digital coatings has been tested by the Rochester Institute of Technology (RIT) or validated by HP's L&P Media and Materials team in accordance with the HP Indigo Over Print Varnish Performance programme.

OPVs protect digital printing inks to produce packaging applications and enhancing the customer experience through a high-quality finish. The range includes Sun Chemical's latest generation of migration-compliant, UV varnish technology suitable for indirect food packaging and meet regulatory requirements such as the Swiss Ordinance for food contact packaging.

The SunEvo[™] Protect LEP OPV range also includes high performance water-based protective coatings developed to enhance the resistance of outdoor print, as well as a range suitable for embellishment, including stampable and soft touch.

Whatever application you are looking to produce, please contact the SunEvo[™] team (DigitalCoatings@sunchemical.com) to find out how we can help you achieve the highest quality finish.
